

FOR IMMEDIATE RELEASE

Array Networks Launches Layer 3 VPN Support for Windows Mobile Devices

First true L3 connectivity and resilient TCP / SSL based architecture on Windows Mobile

MILPITAS, CA – August 19, 2008 – [Array Networks](#) Inc., a leading provider of optimized and secure universal access solutions, today announced that its [SPX Series SSL VPN](#) now supports Layer 3 VPN for Windows Mobile devices. Array's SPX Series is the first SSL VPN to enable enterprises to meet the growing need for streamlined, portable access to business-critical applications. Initial support includes Windows Mobile 5 & 6 as well as popular devices such as Palm Trio, Motorola Q and HP iPaq.

“SSL VPN vendors largely have ignored the handheld market, It's time for competitive vendors to understand and directly address the business value proposition for highly mobile users by introducing better handheld clients and strong value case studies.” said John Girard of Gartner in a December 2007 research note “Magic Quadrant for SSL VPN, North America, 3Q07.”

“Due to overwhelming customer requests, we have enhanced our smart phone and PDA support for Layer 3 access. Layer 3 VPN for Windows Mobile is particularly important for enterprises that wish to standardize on commercially available mobile devices,” said Sunil Cherian, VP of Product Marketing for Array Networks. “This latest capability rounds Array's industry-leading Layer 3 SSL VPN solution, which features support for Windows Vista and IE7, without the need for pre-installed client software.”

Array has established itself as the leader in the secure access market with rich Layer 3 through Layer 7 access from a standard browser. Its Layer 3 VPN provides 3 to 10 times more throughput than competing SSL VPN and IPSec products and is the only true Layer 3 architecture designed specifically for SSL VPN access.

In addition, Array is the first SSL VPN vendor to provide a site-to-site solution featuring its unique, patent-pending Resource PublishingTM feature, as well as the first to offer DesktopDirect a streamlined appliance-based solution for remote desktop access. The SPX Series delivers industry-leading performance and scalability spanning up to 64,000 concurrent users with single digit latency response times.

Array's enhanced SPX software for Windows Mobile is available in August 2008.

About Array Networks

Founded in 2000, Array Networks is a leading provider of high-performance, secure universal access solutions. Array delivers product lines that address the rapidly growing SSL VPN market as well as the application acceleration market. More than 2500

worldwide customers including enterprises, service providers, government and vertical organizations in healthcare, finance, insurance and education rely on Array to provide anytime, anywhere secure and optimized access.
